"The MORE HAY . . . the more cash in your pocket"

It's true either way—whether you sell hay, or feed every ton you produce, the important thing is to *get* the hay. Having it is what counts! How it helps offset feed bills!

How costly can be the sad situation where the hay crop doesn't come through. When weak growth hinders proper starting. When winter reverses take big freezing-out tolls. When weeds take over, to greatly reduce the grass crop.

Your best insurance for quality-and-quantity hay is Hoffman **PROVED-ABILITY** seed. Strains that are *right*! Fifty years' success on thousands of northern farms is the real evidence that Hoffman seed does the job.

Long-Lasting ALFALFA

For nearly forty years, Hoffman "NORTHWEST" alfalfa seed has proved its exceptional merit. This year's quality is excellent. Never any doubt about its background. Produced with care. In areas whose very climates breed hardiness. Often in high altitudes—extreme low temperatures—sudden weather changes. Its source verified by Government authorities. Each bag bears genuine U. S. tag. Always cleaned clean to highest freedom from noxious weeds. Tested and sound.

New "BUFFALO" strain. Genuine Certified seed. Carries strong recommendation as highly resistant to bacterial wilt. Recovers rapidly after cut. Provides larger fall growth. Has a high-survival record. Expensive today because of limited supply. Seems destined for wider use.

Hoffman GRIMM-type Alfalfa gains new users each year. Its specifications similar to above Northwest. Quality seed throughout. Limited amount of Certified Sealed Grimm available. Small supplies of KANSAS and CANADIAN seed.

Good-Cropping CLOVERS

Here is an unusual OPPORTUNITY for clover seed buyers. Genuine Certified "CUMBERLAND" strain of red clover seed. Big, plump, uniform, beautiful color. The disease-resistant type, see catalog.

Investing only three to four extra cents a pound in this highly desirable seed could easily return many extra dollars—more loads of quality hay to put away.

Here, too, is the high-stands REGULAR Hoffman RED CLOVER seed. Strictly top quality, too. And the MAMMOTH (Sapling) taller-growing, one-crop clover. Hard-fighting ALSIKE Clover, smaller seeded, goes farther when sowing. Costs less. Dependable fighter through bad weather that often defeats other clovers.

TIMOTHY seed supply draws nearer to exhaustion. Popular "ECONOMICAL MIXTURE" (about half Red Clover, quarter Alsike, quarter Timothy) saves something on seed bills.

This is the year to put Ladino to work on your farm. Works pasture miracles. Rich in feed elements. Unequalled in carrying capacity. Read pages 6 and 7 in Hoffman Catalog. Seed demand is tremendous. Order early.

Seeds for most of the pasture grasses are costly this year. Crops were short. But figure this way: Even if seed is costly, isn't it better to start now and get the pasture that your stock needs . . . than to wait another year, and maybe then fare no better on the cost feature?

Because so many grass seeds are in such short supply this year, values on Rye Grass have increased steadily . . . demands for it have been enormous. No time like NOW to order every pound of Rye Grass seed you need this summer . . . for the corn field, orchard, potato patch, or elsewhere.

Noticed right along is the increase in sales of Sudan grass seed. Sweet Sudan admirers are wisely engaging their seed. There can be no advantage in waiting to order seed—of any kind. There are no burdensome supplies of any item this year.

On your order for Hoffman field seeds—include Sweet Corn seed for your garden. The "Golden Bounty," "Golden Rocket" (extra early), "Golden Cross Bantam" are grand-tasting hybrids. You'll enjoy eating them this summer.

When ordering Funk G Hybrid seed corn . . . keep in mind that Round kernel seed saves you money. Specify it on your order. See Price List. Every Round kernel has exactly the same germ plasm, same ability to produce, same yield quality as any Flat kernel on the ear. Increasing numbers of folks are making this wise saving each season. Why not you?

FUNK G "5 Star" Hybrids provide extra corn-crop profits

Get everything your hybrid-seed money can buy. All hybrids are far from being alike. The magic that went with the very word "hybrid" a dozen years ago is gone. Today's top hybrids are top because they have the "extras" bred into them that are just not within their competitors. Ability to do many jobs better. Start off quicker. Stand up better. Fight off drought, insects, and disease more successfully.

Funk G hybrids are bred to excel on those five points—and many others. They are outstanding today! Those traits work for you, from the day you plant Funk G seed . . . straight through to harvest. They add up to extra profit from your corn crop.

The ability bred into every Funk G hybrid, coupled with the vast Hoffman-Funk Proving program, provides you with top crop success, KNOWN-in-ADVANCE!

Wherever you farm corn . . . in early, medium, or late sections, there's a *known*-performing Funk G hybrid ready to work for you! One to mature good, sound ears to fill your crib. Another to provide extra tonnage of nourishing ensilage. Plant Funk G hybrid seed this year for top returns from every acre you put into corn.

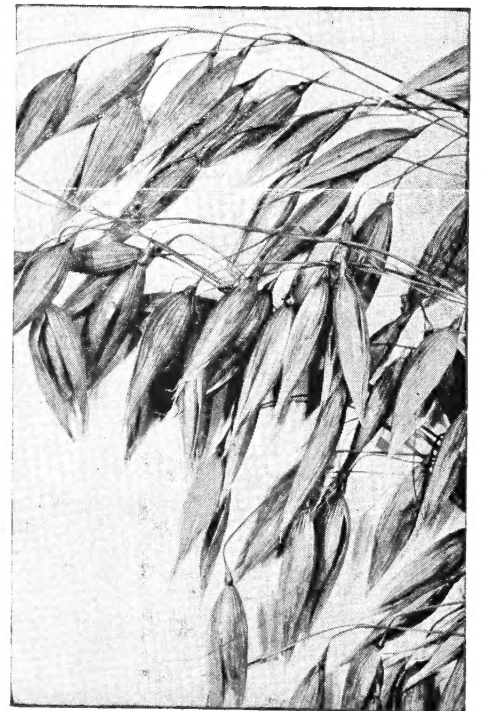

Seed OATS to start you right for a profitable crop at harvest

Here's another case of something good being made better—"Clinton Eleven," an improvement on the original Clinton Oats.

Now you get more uniform ripening. Less green, immature grains. Even height straw that stands up extra well. Does not shell out while waiting for harvest.

You also get an extra good fighter against diseases that have overcome other good varieties. "Clinton Eleven" is a top performer in this respect. You get grain of high feed value, meaty kernel. And yieldability has been improved. Hoffman "Clinton Eleven" seed is bound to please. Two other good varieties—the straight "Clinton" and "Ajax"—are in stock, and wanted by many folks who know their good performance records. See Price List.

**when you
start your**

Clovers and Alfalfa

“When you buy on price alone, it’s unwise to pay too much. It is worse to pay too little!

“When you pay too much, you lose a little money, and that is all . . . but when you pay too little, you stand a chance to lose everything, because the article you are buying may prove incapable of doing the very thing it was bought to do. . . . Taking it by and large, the common law of business balance makes it impossible to pay a little, and get a lot.”

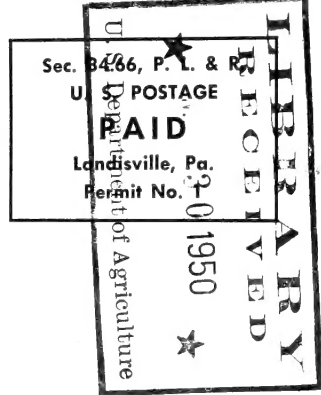

—From a statement by National Cash Register Co.
